

M-Powertrain & Suspension

© FSG - Schulz

Part Development (CAD & FEM)

Job description

In order to develop a car that is as fast as possible, it is very important to have a balanced wheel suspension. This extends from the rim, to the wheel carrier, to the spring damper system.

This package will be further developed and optimized for the next car. The design and construction of these components offer a unique insight into the world of motorsports and the driving dynamics phenomena of a race car.

What will be your tasks?

- Familiarization with component design
- Development of new concepts and their implementation into a complete system
- Collaboration in cross-group tasks (e.g. testing, manufacturing)
- Participation in team and group meetings

What are our requirements?

- High motivation, team spirit and fast comprehension skills
- Good understanding of mechanics
- Ideally previous knowledge in the field of design and manufacturing
- Optional practical experience
- Willingness and dedication to the project
- Good knowledge of German / English
